THE NEXT BIG THING

PUSH-TO-TALK

FROM THE CONNECTED SAFETY LEADER

PUSH-TO-TALK

Arriving in December 2018, Blackline is introducing a new G7c push-to-talk (PTT) service option that makes G7c function just like a two-way radio. Employees immediately connect with teammates on the same channel, or switch to another channel to speak with other teams. Unlike traditional radios, there's no radio licensing and no range limit. Built-in 2G/3G communications means that G7c works right out of the box. Plus, G7c turns three devices into one — it's a world-leading gas detector, lone worker safety monitor and two-way radio.

- No need for expensive, intrinsically safe radios
- Affordable — more employees can use radio functionality
- Connect instantly with coworkers in over 100 countries
- Up to 100 channels for manageable communications
- All-call channel for emergency broadcasts to everyone in the network
- Connect with 250 people on a single channel
- Integrates seamlessly with gas detection and real-time safety options
- Configure channel usage to accommodate teams, sites, regions and locations

INSTANT COMMUNICATIONS WITH 2G/3G CONNECTIVITY

Communicate instantly with team members from anywhere in the world with the push of the red latch. G7c's PTT capability leverages integrated 2G/3G connectivity with network coverage in over 100 countries. Employees in one location can seamlessly speak to other teams on site, across the country and even internationally.

G7c users can quickly change channels from the built-in menu system, selecting from 99 channel options. Devices on the same channel are able to communicate with one another, like a traditional two-way radio. The all-call channel allows a message to be sent to all G7c devices, across all channels in an organisation. All-call broadcasts are recommended for safety supervisors, managers and the live safety monitoring team.

No additional networks, infrastructure or transmission distances to manage

MAXIMISED PRODUCTIVITY

G7c is the world's first gas detector and lone worker monitor to feature push-to-talk communications. From start-up, teams will be able to stay in touch with each other in real-time, to coordinate their work while ensuring everyone's safety.

Many businesses haven't equipped each employee with two-way radios but they wear a gas detector or lone worker monitor. By combining robust gas detection, lone worker monitoring and instant two-way communications in one device, Blackline solves the challenge of purchasing, maintaining and wearing multiple devices.

An employee's role can require them to stop work to access a phone or radio in order to confirm their safety or communicate activities, causing a loss of productivity. PTT is ideal for quick, day-to-day communications — send a message with the push of a button and receive a message without touching the device at all. Work doesn't need to stop in order to talk to their team, helping them adhere to project schedules and meet deadlines.

ONE-TOUCH COMMUNICATIONS

SENDING A PTT MESSAGE

1. Press and hold the red latch
2. When G7c finishes beeping, continue to hold and begin talking
3. When you're finished talking, release the latch
4. G7c will beep once more to let you know it's sending the message
5. Everyone on the channel will receive the message

RECEIVING A PTT MESSAGE

1. G7c beeps twice to signal an incoming PTT message
2. G7c plays the message
3. G7c beeps once more when the message is done

HOW TO BUY

G7 INSIGHT

Buy — Blackline offers a traditional purchase option with a one-time purchase of hardware and recurring annual service plan options.

SKU — Purchase*

G7C-Q-HIMO-EU	G7c, G7 Multi-gas diffusion cartridge, H2S, LEL-I, CO, O2 sensors
SER-XXP-Q-HIMO-1Y	G7 Insight, four-gas plus push-to-talk

* Items shown includes our most popular G7c multi-gas pump configuration with hydrogen sulphide (H2S), combustible gases (LEL), oxygen (O2) and carbon monoxide (CO). Blackline offers a complete line of gas sensors and configurations — contact us for pricing and further details.

WITH G7, YOU'RE FUTURE-PROOFED

G7 Insight

Blackline connected safety solutions are highly configurable and support businesses as their needs evolve over time. Looking for the best gas detector that solves regulator compliance? G7 Insight one-for-one replaces conventional 'beep-and-flash' detectors with a connected solution that automates gas detection compliance and reporting. With a compliance dashboard and Blackline Analytics, you can quickly see every facet of your gas detection programme in order to maximise quality and control.

Real-time Safety

Many businesses opt to add real-time safety features to expand the functionality of their G7 systems, including push-to-talk, fall detection, no-motion (man-down) detection and employee check-ins. Businesses can monitor the safety of their own teams or leverage Blackline's Alarm Receiving Centre partners that provide 24/7 live monitoring services. Additionally, Blackline offers two-way voice calling, connecting workers in the field with a live monitoring team, delivering situational awareness during an emergency.
